REGISTER OF RAINFALL IN 1877

Kept at *Countdown House Gorse Co. Wexford* by *W. Brand for Earl of Countdown*

Latitude

Time of Observation... *9 a.m.*

Height of Receiver
of Rain Gauge.

Above Ground... *3 ft.*

Longitude

Above Sea Level... *as in former returns*

CONDENSED INSTRUCTIONS.—Fix the gauge firmly, with its orifice level and 1 ft. above the ground, quite clear of trees and walls, empty it daily at 9 a.m., and enter it against the preceding day. Snow should be melted slowly in a closed vessel and the amount entered as rain, an "S" being prefixed. With a low temperature and high wind, it is sometimes blown out of the funnel; then take one-twelfth of the average depth of snow and enter that as the yield of water—e.g., 3 inches snow = .25 of rain. When there is no rain, a line should be drawn, rather than cyphers inserted.

Observers will oblige by sending duplicates of this Register, or even the monthly totals, to Mr. G. J. Symons, of 62, Camden Square, London, N.W., for insertion in his annual tables of *British Rainfall*, which now contain returns from more than 1500 stations.
Additional copies of this form (price 3d. each) can be obtained of the above, from Mr. STANFORD, 6 & 7, Charing Cross, and from all the leading opticians.
